

MASDAR CITY

Maximum reliability with **SUNNY CENTRAL 560HE**

In 2008, an ambitious project began in the United Arab Emirates. The country located on the Persian Gulf Coast is building Masdar City, a carbon-neutral city dedicated to science. A PV power station planned and implemented by Enviromena Power Systems is already supplying part of the energy from renewable resources.

The city is expected to have a population of about 50,000 and be a model for modern urban planning. Numerous international companies and research institutes such as the renowned Massachusetts Institute of Technology are collaborating on the development of Masdar City.

System size

- 10 MWp
- 87,000 modules from Suntech and First Solar

Location

- Masdar, UAE
- Commissioning: 2009
- Planning and realization: Enviromena Power Systems

Annual yield

- 17,500 MWh

Inverters

- 16 Sunny Central 560HE

Utility-Grade PV System Technology
